

With its extensive coastline and unique location in the South Pacific, New Zealand is a world centre of seabird activity.

Field Guide to New Zealand Seabirds provides ready identification of, and up-to-date information on, the many species that are likely to be encountered in New Zealand waters. This updated second edition includes the recently rediscovered New Zealand Storm Petrel (on right).

SEABIRD GROUPS COVERED ARE:

- albatrosses
- boobies
- mollymawks
- shags
- shearwaters
- frigatebirds
- petrels
- skuas
- prions
- gulls
- penguins
- terns
- tropicbirds
- noddies
- gannets

Viewing localities are given in a handy checklist. More than 100 photographs are featured, and each species is described in terms of:

- identification
- key behavioural characteristics
- similar species
- population status
- distribution and breeding areas
- best viewing locations

Brian Parkinson has worked for many years as a marine biologist in Australia, New Guinea and Fiji. He now lives in Auckland and is a full-time natural history writer.

Tim Lovegrove, technical editor, is a natural heritage scientist with the Auckland Regional Council.
